

MCT invests in infrastructure

MCT, one of the world's leading motorsport engine constructors, has continued to improve its service, by investing in an additional three CNC machine tools. The new arrivals give MCT the ability to further reduce turnaround times on milling projects, in addition to increasing the company's total solution capabilities.

MCT's new CNC resources consist of two Matsuura multi-pallet H-Plus 405 horizontal devices and a single pallet vertical milling machine from the same manufacturer. The additional manufacturing capabilities will be utilised by MCT's skilled operators to undertake a range of projects.

The investment is part of MCT's strategy to support medium-sized batch manufacturing, bringing further stability and vision to the service it offers its clients. The additional technology has further strengthened the company's machining potential, allowing greater flexibility in scheduling of jobs and even faster project turnaround times.

MCT's managing director, Kevin Lee, explains: "Our commitment to delivering market-leading programmes for our client base means we are seeking, constantly, to improve our infrastructure and capabilities at Leaffield, Oxfordshire. MCT's latest investment will further enhance our ability to offer a total solution to customers, across the automotive, motorsport and aerospace sectors."

Ends.
